# STELLAR™ FASTENING SYSTEM

## APPLICATION ADVICE

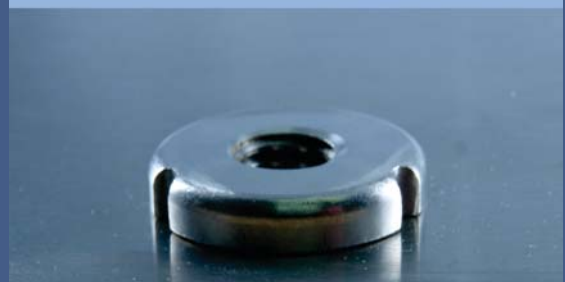

**Stellar™ Fastening System** is specifically designed for applications where a polished, aesthetically pleasing finish is paramount.

With the corrosion resistance of stainless steel and the holding capacity of a 12mm thread size, the Stellar™ Fastening System can launch the ordinary into the realm of extraordinary!

Where fixtures require matching head types on either side of the product, Stellar™ nuts are used in conjunction with a section of threaded rod.

Where fixtures require only one external fastener, Stellar™ nuts can also be used in conjunction with a standard Hex or Socket Head Bolt.
